Warehouse management

Due to our big commitment in integrated automation we also gathered a lot of knowledge of warehouse management. We can integrate your new or warehouse into a new or existing process control system. The big advantage of integrated automation consists in the total controlling, monitoring and operating of all the components of an industry plant. That means you have a complete overview – from the batch plant over the production machines up to the warehouse management.

It's also a pleasure for us to create a discrete control system for your warehouse. We plan and program tailor made control software and visualization for HMI (human machine interface) devices or also PC's. Furthermore, data exchange between the control system and the existing databases or business management software is possible.
